

## CLAIMS

1. A transmission method for stock price information, comprising:

a stock price update step of successively updating and storing information on stock prices,

a condition input step of inputting one or more conditions concerning stock prices to be notified to a customer,

a condition detection step of detecting whether said stock price updated by said stock price update step satisfies said one or more conditions input by said condition input step or not, and

a notification step of, when said one or more conditions are satisfied at said condition detection step, notifying said customer of the satisfaction.

2. A transmission method for stock price information, comprising:

a stock price update step of successively updating and storing information on stock prices,

a condition input step of inputting one or more conditions concerning stock prices to be notified to a customer,

a condition detection step of detecting whether said stock price updated by said stock price update step satisfies said conditions input by said condition input

5. A transmission method for stock price information according to Claim 2 or 3, wherein said condition detection step detects whether said input one or more conditions are satisfied or not every a predetermined time.

6. A transmission method for stock price information according to Claim 2 or 3, wherein said condition detection step detects almost continuously whether said input conditions are satisfied or not.

7. A transmission method for stock price information according to Claim 2 or 3, wherein in said electronic mail notified by said notification step, an address of a home page linked to a current market is mentioned.

8. A transmission method for stock price information according to Claim 2 or 3, wherein in said electronic mail notified by said notification step, an address of a home page linked to a certification screen to a stock buying and selling form is mentioned.

9. A transmission method for stock price information according to Claim 2, wherein there are a plurality of addresses of said electronic mail notified by said notification step.

10. A notification information data base, comprising:

a condition file for storing one or more conditions concerning a name code input from a customer terminal and a stock price of said name to be notified and

a notification destination file for storing a notification destination to be notified when said one or more conditions are satisfied.

11. A condition detection server, comprising:

means for temporarily storing one or more conditions concerning stock prices input from a customer,

means for receiving stock price fluctuation information from a stock price information server that stock prices are successively updated and confirming whether said one or more conditions concerning stock prices are satisfied or not, and

means for outputting, when said one or more conditions are satisfied, the satisfaction.

12. A customer terminal for transmitting and receiving stock price information, displaying a screen for promoting to input one or more conditions concerning stock prices, transmitting said one or more conditions input on said screen, and when said input conditions are satisfied, receiving information of the satisfaction by electronic

mail.

13. A customer terminal for transmitting and receiving stock price information according to Claim 12, wherein on a same screen as said input screen, whether said electronic mail to be transmitted when said one or more conditions are satisfied is already transmitted or not is displayed.

14. A customer terminal for transmitting and receiving stock price information according to Claim 12, wherein an address of a home page of a predetermined form of stock buying and selling is displayed in contents of said received electronic mail and when said address is clicked, a predetermined name with said one or more conditions input is input and displayed on said predetermined form.

15. A transmission system for stock price information, composing:

a notification information data base for storing one or more conditions concerning notification of a stock price of a specific name input from a customer terminal connected to a network and a customer's mail address in correspondence to each other,

a stock price storage server for updating and storing said stock price of said specific name on a market,  
a condition detection server for detecting whether said

step or not, and

a notification step of, when said one or more conditions are satisfied at said condition detection step, notifying said customer of the satisfaction by electronic mail.

3. A transmission method for stock price information, comprising:

a stock price update step of successively updating and storing information on stock prices,

a condition input step of inputting one or more conditions of a technical index concerning a stock price trend of a name to be notified to a customer,

a condition detection step of detecting whether said stock price updated by said stock price update step satisfies said one or more conditions input by said condition input step or not, and

a notification step of, when said one or more conditions are satisfied at said condition detection step, notifying said customer of the satisfaction by electronic mail.

4. A transmission method for stock price information according to Claim 2 or 3, wherein said information notified by said notification step includes said stock price trend of said name.

one or more conditions stored in said notification information data base are satisfied or not using said stock price of said specific name stored in said stock price storage server, and

a stock price notification mail server for transmitting, when said condition detection server detects that said stock price of said specific name satisfies said one or more conditions, electronic mail to said customer mail address corresponding to said one or more conditions.

16. A transmission system for stock price information, composing:

a notification information data base for storing one or more conditions for a technical index concerning notification of a stock price of a specific name input from a customer terminal connected to a network and a customer's mail address in correspondence to each other,

a stock price storage server for updating and storing said stock price of said specific name on a market,

a condition detection server for detecting whether said technical conditions stored in said notification information data base are satisfied or not using said stock price of said specific name stored in said stock price storage server, and

a stock price notification mail server for

transmitting, when said condition detection server detects that said stock price of said specific name satisfies said technical conditions, electronic mail to said customer mail address corresponding to said technical conditions.
